Module 5
Analyzing Longitudinal Data or Repeated Measurements
Purpose of the Longitudinal Analysis
Possible Techniques
To examine change over time in a single dependent variable within one group
Repeated Measures ANOVA
Repeated Measures ANCOVA
Linear Mixed-Effects Models
To examine change over time in a single dependent variable across more than one group
Mixed-Design ANOVA
Repeated Measures ANCOVA
To examine change over time in more than one dependent variable within one group
Repeated Measures MANOVA
Multivariate Linear Mixed-Effects Models
To examine change over time in more than one dependent variable across more than one group
Mixed-Design MANOVA
Multivariate Linear Mixed-Effects Models
To examine change over time in the structural model between latent and manifest variables
Latent Growth Models
Cross-Lagged Panel Models
Dynamic SEM
Multilevel SEM
To examine trends and patterns of descriptive statistics over time
Time Series Analysis
Trend Analysis
To analyze population-averaged effects for correlated data
Generalized Estimating Equations
