Module 10 (a)
Item and Test Statistics Based on Classical Test Theory

Test Theory	Type of Evidence	Reliability Method	Number of Dimensions	Item Scoring Type	Possible Techniques
Classical Test Theory	Item and test statistics				Item Difficulty
					Item Discrimination Index
	Reliability	Internal consistency	Unidimensional	Dichotomous	KR-20
					KR-21
				Polytomous	Cronbach's Alpha
				Mixed	McDonald's Omega
					Stratified Cronbach's Alpha
					Angoff-Feldt
					Feldt-Raju
			Multidimensional		McDonald's Omega
		Test-retest		Dichotomous	Pearson Correlation
					McNemar Test
				Polytomous	Pearson Correlation
					Spearman Rank-Order Correlation
				Mixed	Pearson Correlation
					Spearman Rank-Order Correlation
					McNemar Test
		Parallel forms		Dichotomous	Pearson Correlation Coefficient
					Phi Coefficient
				Polytomous	Pearson Correlation Coefficient
					Spearman Rank-Order Correlation
				Mixed	Pearson Correlation Coefficient
					Spearman Rank-Order Correlation
					Phi Coefficient
		Inter-rater reliability			Simple Percent Agreement
					Cohen's Kappa
					Fleiss' Kappa
					Intraclass Correlation Coefficient
					Krippendorff's Alpha
