Module 10 (b)
Validity Based on Classical Test Theory

Theory	Psychometric Property	Type of Validity	Validity Subtype	Item Scale Level	Possible Techniques
Classical Test Theory	Validity	Content validity			Content Validity Index
					Concept Mapping
					Q-Sort Method
		Criterion-related validity			Correlation Coefficient
					Univariate Regression Models
					Multivariate Regression Models
		Discriminant validity			t Test / ANOVA
					Point-Biserial / Polyserial Correlation
					Discriminant Analysis / Logistic Regression
		Construct validity	Structural validity	Continuous	PCA / EFA / CFA
				Polytomous	PCA / EFA with Polyserial Correlations
					CFA for Ordinal Data
					Categorical PCA
					Multiple Correspondence Analysis
				Dichotomous	PCA / EFA with Tetrachoric Correlations
					Categorical PCA
					Multiple Correspondence Analysis
			Differential item functioning		Angoff Transformed Item Difficulty
					Dorans Standardization
					Mantel-Haenszel Chi-Square
					Logistic Regression
			Test equating		Linear Transformation
					Equipercentile Transformation
					Polynomial Equating
			Measurement invariance		Multigroup CFA
					DIF Analyses
